About

Computer Science student focused on becoming a strong problem solver and software engineer, with hands-on experience in software development, AI, and building practical technology solutions. I enjoy turning ideas into working projects, learning new technologies, and continuously improving my problem-solving and coding skills. Currently seeking opportunities to apply my technical skills, contribute to meaningful projects, and grow as an engineer.

Education

University of Mumbai

B.K. Birla College, Kalyan

Bachelor of Science in Computer Science

June 2024 - July 2027

Kalyan, Maharashtra

CGPI : 9.91

Model College, Thakurli

HSC

Thakurli, Maharashtra

Grade: 80.50%

Experience

Computer Society of India - Mumbai Chapter, BKBCK

Coordinator | Jul 2026 - Present

Kalyan, Maharashtra

- Coordinate and manage technical events, hackathons, workshops, and student initiatives.
- Lead multiple student teams, overseeing planning, execution, collaboration, and operational responsibilities.
- Mentor team heads and members while resolving organizational challenges.
- Coordinate with faculty and student teams to ensure smooth execution of technical initiatives and internal projects.

Technical Team Head of College | Jun 2025 - Jul2026

- Organized and managed technical events, hackathons, and workshops for 500+ students.
- Improved project workflows, documentation standards, and collaboration processes.
- Mentored junior members, handled team coordination, and solved technical + operational blockers.
- Ensured high-quality execution across events, technical initiatives, and internal team projects.

Technical Team Member | Aug 2024 - Jun 2025 · 11 mos

- Contributed to multiple student technical initiatives and community projects.
- Supported planning & execution of workshops, coding events, and departmental activities.
- Assisted in project research, documentation, and ideation for CSI events.

TechKshetra - College Tech Club

Coordinator

Kalyan, Maharashtra

- Coordinate technical and technology-focused events, workshops, competitions, and student activities across the college.
- Lead student teams in planning and executing club initiatives, ensuring effective collaboration and timely delivery.
- Mentor and coordinate team members while managing event operations, responsibilities, and execution.
- Contribute to building a stronger technical community by encouraging student participation in technology and innovation initiatives.

Student Council

Council Member

Kalyan, Maharashtra

August 2024 - Present

- Worked with the council to organize cultural and academic events.
- Assisted in planning, logistics, and student participation activities.
- Represented student perspectives in academic discussions.

GeeksforGeeks

Campus Mantri

January 2026 - June 2026

- Represented GeeksforGeeks within the campus community, promoting technical learning initiatives and opportunities.
- Organized and coordinated activities to increase student engagement with GeeksforGeeks technical content and programs.
- Encouraged students to upskill through learning opportunities and actively drove participation in campus initiatives.
- Served as a reliable point of contact for students, collaborating with peers to ensure effective communication and execution.

ShadowFox

Data Science Intern

Sept. 2025 - Oct. 2025

Remote

- Authored detailed technical documentation on Python data visualization libraries, including Matplotlib and Pandas, explaining their core functions, plotting methods, and data-handling capabilities.
- Illustrated practical examples and use cases to assist developers and students in effectively utilizing these libraries for analytics and reporting tasks.

Codtech IT Solutions

Python Programming Intern

June 2025 - July 2025

Remote

- Built an AI Chatbot using NLP for interactive query handling.
- Integrated and visualized data from public APIs.
- Implemented machine learning models for predictive analysis.
- Automated report generation from CSV data using Python.

Technical Skills

Languages : Python, SQL, C++, C, C#, Javascript, TypeScript, Java
Technologies/Frameworks : React.js,Next.js, Git, GitHub, MySQL

Certifications

AI Fundamentals: Foundations for Understanding AI, AI Literacy, MongoDB Overview: Core Concepts and Architecture, Google Play Academy - Store Listing Certificate, Intro To Machine Learning (Kaggle), SEO With AI, Front End Development - CSS, Introduction to Artificial Intelligence, Java Programming, Hands-on with AI Productivity Essentials: ChatGPT & Beyond (Udemy), Python Programming, Programming In C Certification, C++ Programming Certification, Arduino (The Ministry of Science and ICT of the Republic of Korea),

Projects

Youtube Video Summarizer

Github Link

- Developed AI-powered YouTube video summarizer using Python, OpenAI Whisper for transcription and Hugging Face transformers for intelligent content summarization
- Implemented yt_dlp for efficient YouTube audio extraction and created responsive web interface using Gradio framework for user interaction
- Engineered end-to-end pipeline from video download to transcription to summarization, delivering concise content summaries through intuitive web application
- Successfully integrated multiple AI technologies including speech recognition and natural language processing to automate video content analysis workflow

AgriSahayak - Smart Agricultural Intelligence Platform

Github Link

- Developed AI-powered disease detection system achieving 85-95% accuracy for 10+ plant diseases using Hugging Face ML models
- Built offline-first PWA architecture serving 300+ Indian mandis with real-time market intelligence and crop advisory features
- Implemented comprehensive React TypeScript application with multi-language support (English/Hindi) for 50M+ Indian farmers
- Created scalable agricultural platform with IndexedDB persistence, reducing diagnosis time from hours to 2-10 seconds per analysis

Samvaad - Real-Time Chat Application

Github Link

- Built secure authentication system with OTP email verification using Supabase Auth, implementing complete user signup/login/logout flows
- Implemented real-time messaging using Supabase Realtime Subscriptions for instant message delivery between users without page refreshes
- Created 1-on-1 chat functionality allowing users to find contacts by email and initiate private conversations with dynamic contact list management
- Designed robust security architecture with Row Level Security (RLS) policies and PL/pgSQL database functions ensuring users can only access their own messages and chat data.

Smart Exam Hall Monitoring System

Github Link

- Developed real-time motion detection using OpenCV and computer vision to monitor exam hall integrity
- Implemented network-based alert system with HTTP POST communication between detection and alert modules
- Created sustained motion detection logic with configurable thresholds and alert latching mechanisms
- Built modular IoT architecture integrating laptop camera with ESP32 microcontroller for remote alerts

PyQR

Github Link

- Developed a Python-based QR code generator that converts user-provided URLs into downloadable PNG QR codes.
- Implemented customizable QR code styling through user-defined HEX color values with input validation and fallback handling.
- Automated output directory creation and file management for organized storage of generated QR codes.
- Integrated the qrcode library with Pillow support to generate and export QR code images programmatically.

Authenticity

Github Link

- Developed a web application that evaluates URLs for potential security threats including malware, phishing, and unwanted software.
- Integrated Google's Safe Browsing API to perform real-time URL threat analysis against security databases.
- Built a Flask-based backend to handle API communication and process URL security checks.
- Designed a responsive frontend with dynamic threat indicators to present security analysis and results clearly to users.

ProgrammerJokes

Github Link

- Developed a full-stack programming humor platform using ASP.NET Core MVC and .NET 8 with persistent relational data management.
- Implemented secure user authentication and authorization using ASP.NET Core Identity with customized registration and login workflows.
- Built CRUD operations, server-side search, content ownership, and a one-vote-per-user system using Entity Framework Core.
- Designed responsive Razor views with Bootstrap and custom CSS, incorporating reusable layouts, partial views, and dynamic content.

DiyaGlow-ESP32

Github Link

- Developed a Wi-Fi-controlled smart lighting system using ESP32 with a self-hosted web dashboard for remote LED control.
- Implemented ESP32 Access Point mode and an onboard web server, enabling offline control from smartphones and laptops.
- Programmed PWM-based LED brightness control to create a smooth sequential glow effect across six LEDs.
- Integrated embedded hardware with a responsive web interface to demonstrate an end-to-end IoT system without cloud dependencies.

Ask-Llama

Github Link

- Developed a locally hosted question-answering application powered by Llama-based language models through Ollama.
- Built a FastAPI backend to serve LLM-powered responses and connect the model layer with a browser-based interface.
- Implemented natural-language question answering with context-aware responses while keeping inference local.
- Designed the application for offline usage, eliminating dependency on external AI APIs for model inference.

VoxRead

Github Link

- Developed an accessible browser-based text-to-speech application using JavaScript and the Web Speech API.
- Implemented configurable voice, language, speech rate, pitch, and volume controls with pause, resume, stop, and page-reading functionality.
- Added active-text highlighting and structured content reading for articles, stories, quotes, headings, and lists.
- Built a responsive accessibility-focused interface with theme switching, font resizing, keyboard shortcuts, and mobile support.
